A	Floating Center Dot	E	1 MOA Hash Lines
B+C	1/4 MOA Scale	F	Floating Holdover Dots
D	2 MOA Hash Lines	G	Holdover Indication #

DESIGN FEATURES

APR stands for “All-Purpose Reticle”. The APR-1C is the simplified version, with no holdover dots off the vertical axis and an easy-to-use design that is kind on the eye.

MOA-SCALE:

The MOA-Scale on the horizontal & vertical crosshairs allow the shooter to measure objects downrange and quickly make adjustments. With one division equalling one click, the guesswork is gone.

DE-CLUTTERED DESIGN:

With simple markings on the elevation & windage axis, and the absence of complex features, the shooter gets a clear view of his target with no distractions.

NUMBERED MARKINGS:

Numbers on the vertical axis allow shooters to quickly find hold points under pressure.

FLOATING DOTS:

The centre dot & floating holdover dots allow you to clearly see your target without lines distorting your view.
